60 seconds

May is Better Hearing & Speech Month. Speech, language or hearing problems can occur anytime from birth defects, common illnesses, accidents, brain injuries, stroke or severe noise exposure. Speech-language pathologists and audiologists are specially trained professionals that can help you improve your communication challenges. It is estimated that 2.7 million Americans have speech impairments and 34 million are hearing impaired. You can protect yourself by living a healthy lifestyle – getting regular checkups, getting immediate care for chronic ear infections, wearing earplugs during noisy activities. You can also safeguard against brain injuries by using seat belts and child safety seats while driving, and wearing helmets when bicycling or motorcycling. For more information, visit the New Jersey Speech-Language-Hearing Association Web site, www.njsha.org.
